

Environmental Policy

Perkins+Will's London office is committed to minimising the impact of its activities on the environment.

The key points of its strategy to achieve this are:

- Minimise waste by evaluating operations and ensuring they are as efficient as possible.
- Minimise toxic emissions created by its operations and the source of its power requirement.
- Actively promote recycling both internally and amongst its customers and suppliers.
- Source and promote a product range to minimise the environmental impact of both production and distribution.
- Meet or exceed all the environmental legislation that relates to the Company.
- Use an accredited program to offset the greenhouse gas emissions generated by one off activities which are not controlled by the above.
- Monitor, assess and record progress of the system to drive its continued development and improvement.

These objectives will be focused on three areas of the company's activities.

- Day to day operation of its office
- Design services
- Construction phase services
